Jennifer Joseph

New Orleans, LA | jennifer.n.joseph@gmail.com | https://github.com/jnycolej | https://jennifernjoseph.com

SUMMARY

Full-Stack software engineer with experience building real-time, event-driven applications and scalable APIs using React, Node.js, and MongoDB. Developed multiplayer systems with synchronized state, secure workflows, and containerized deployments. Strong focus on backend architecture and performance optimization.

EDUCATION

B.S., Computer Science **– University of New Orleans (now LSU New Orleans)** **Dec. 2024**
A.A.S., Computer Information and Technology **– Delgado Community College** **May 2018**

WORK EXPERIENCE

Full-stack Software Engineer – Independent Projects | Remote | Jan. 2023 – Present

- Designed and built full-stack applications featuring real-time systems, secure authentication, and scalable data architectures
  Key Projects
  - **BookKeeper** (Full-Stack Media Tracker)
    - **Tech:** React, Node.js, Express, MongoDB, Auth0, Docker
    - Developed a full-stack application for tracking books, movies, TV shows, and games with flexible metadata and status management.
    - Designed and implemented RESTful APIs with secure authentication using Auth0 and protected routes.
    - Modeled scalable MongoDB schemas supporting dynamic attributes (ratings, formats, reading history, metadata).
    - Built advanced filtering and sorting logic to efficiently manage large datasets.
    - Containerized the application using Docker to ensure consistent development and deployment environments.
  - **Sports Shuffle** (Real-Time Multiplayer Game)
    - **Tech:** React, Node.js, Express, MongoDB, Socket.IO, Docker, Swift, SwiftUI
    - Designed and built a real-time multiplayer application using Socket.IO, enabling synchronized gameplay across multiple users in isolated game rooms.
    - Developing a native iOS version using Swift and SwiftUI, translating mapped gameplay workflows into mobile screens and integrating backend APIs and Socket.IO for room creation, joining, and session reconnection.
    - Implemented server-authoritative game logic to ensure score validation, turn enforcement, and event confirmation workflows.
    - Architected an event-driven system supporting live reactions, voting mechanics, and dynamic scoring updates.
    - Optimized React rendering to handle rapid state changes during gameplay without performance degradation.
    - Tested and handled edge cases including player reconnects, concurrent actions, and state desynchronization
  - **SpotRoulette** (Decision-Based Place Picker)
    - Developed a decision-based application that filters and randomly selects venues based on user-defined criteria.
    - Implemented constraint-based backend logic exposed via RESTful APIs (Node.js, Express).
    - Designed for extensibility with support for preference weighting and future personalization features.

AI Trainer (Contract) – Handshake AI Fellowship | Remote | Oct. 2026 – Present

- Evaluate large language model (LLM) responses for accuracy, clarity, and adherence to task requirements.
- Assess response quality using project-specific evaluation criteria and provide feedback on identified issues.

Office Assistant – City of New Orleans | New Orleans, LA | Feb. 2018 – Dec. 2019

- Supported the Director of Finance with scheduling, correspondence, and cross-departmental coordination
  - **Key Results:** Created an Excel tracker to flag late purchase-order submissions and identify recurring departmental delays, enabling targeted follow-up and helping reduce late submissions.

Lead Cashier – Ulta Beauty | Gretna, LA | Oct 2014 – May 2018

- Led and directed a team of over 10 cashiers in a high-volume retail environment.

CERTIFICATIONS, SKILLS & INTERESTS

- **Certifications:** Software Engineering, University of New Orleans
- **Technologies:**
  - **Languages**: Java, JavaScript, Python, C, SQL (MySQL, Oracle), Swift
  - **Frameworks & Tools**: React, Node.js, Express, React Native, MongoDB, Docker, Jenkins, Socket.IO, Heroku, SwiftUI
  - **Other:** Git, REST APIs, JWT, Auth0
